List of Functions not Working Properly:

- API endpoint may fail to respond as it is a dev server
- If a session did not provide its location it will default to 0,0 Longitude, Latitude
- Search bar doesn't do anything for heat chart, bubble chart, or bar graph
- Bar graph might not show email addresses if they are too long.
- Given the wrong doc id in the url, the chart will not display any data
- Tooltips not aligning when windows resized.
- Version change caused queue to stop working.
- Zooming issue when using svg used for attr event transform.
- Heat Chart Legend might not depict the correct colorScale
- Heat chart isn't full dynamic, months are static for now
- **NEW ADDITIONS BELOW:**

- Heat chart might go past the encapsulation/div
- Hover card on map nodes may linger
- Valid docId is needed in path, otherwise data will be null and nothing will render
- Label may be too long for bar graph and you may not be able to see it.
- Hover card does not display when Google maps is in full screen
